

Pratica S5/L1

Traccia:

Sulla base di quanto visto, creare una regola firewall che blocchi l'accesso alla DVWA (su metasploitable) dalla macchina Kali Linux e ne impedisca di conseguenza lo scan. Un requisito fondamentale dell'esercizio è che le macchine Kali e Metasploitable siano su reti diverse, potete aggiungere una nuova interfaccia di rete a Pfsense in modo tale da gestire una ulteriore rete. Connettetevi poi in Web Gui per attivare la nuova interfaccia e configurarla.

Si configura Pfsense le porte :

- La porta em1 192.168.50.1/24
- La porta em2 192.168.32.1/24

```
FreeBSD/amd64 (pfSense.home.arpa) (ttyv0)
VirtualBox Virtual Machine - Netgate Device ID: e5b71271d7a51609005d
*** Welcome to pfSense 2.7.2-RELEASE (amd64) on pfSense ***

WAN (wan)      -> em0      -> v4/DHCP4: 10.0.2.15/24
LAN (lan)      -> em1      -> v4: 192.168.50.1/24
LAN1 (opt1)    -> em2      -> v4: 192.168.32.1/24
OPT2 (opt2)    -> em3      ->

0) Logout (SSH only)          9) pfTop
1) Assign Interfaces          10) Filter Logs
2) Set interface(s) IP address 11) Restart webConfigurator
3) Reset webConfigurator password 12) PHP shell + pfSense tools
4) Reset to factory defaults  13) Update from console
5) Reboot system              14) Enable Secure Shell (sshd)
6) Halt system                 15) Restore recent configuration
7) Ping host                   16) Restart PHP-FPM
8) Shell

Enter an option: 
```

Dopo di che si entra nel sito di pfsense all'indirizzo 192.168.50.1 , username: admin ; password : pfsense. Non ho dato la regola per bloccare l'indirizzo di metasploitable e come si vede kali (192.168.50.100) riesce ad accedere al meta(192.168.32.101)

$
  
```

Una volta impostati la regola sul firewall si nota subito che la rete non si può accedere

WARNING: The 'admin' account password is set to the default value. [Change the password in the User Manager.](#)
